Fear Segment

Suggested Heading

Why 80% of Web Apps Fail

3 blocks with icon + heading + text

Poor CRO - Weak messaging, poor UX, and ineffective CTAs reduce inquiries and conversions.

Performance Lag - A 2-second delay is enough to lose 53% of your audience. Slow loading pages increase bounce rates, reduce engagement, and negatively impact SEO rankings.

Outdated Architecture - Rigid architectures break when traffic spikes. Fragmented systems create operational inefficiencies and limit growth.

See –

Why 80% of Mobile Apps Fail.

Building an app is easy. Building a successful product requires avoiding the common pitfalls that drain budgets and lose users.

Poor UX Design

Complexity kills retention. If users can't navigate your app intuitively within seconds, they won't come back.

Performance Lag

A 2-second delay is enough to lose half your audience. Slow loading states and choppy animations drive churn.

Lack of Scalability

Rigid architectures break when traffic spikes. We build apps that grow with your user base seamlessly.

Our Solution

Suggested Heading

Why Businesses Choose Matrix Media

Table

Challenge	Our Solution	Business Impact
Slow website performance	Core Web Vitals optimization and lightweight architecture	Faster load times and improved SEO rankings
Low lead conversion	CRO-focused UX/UI and strategic CTA placement	Higher inquiries and improved conversion rates
Poor scalability	Scalable CMS and modular development approach	Easier growth and lower maintenance effort
Weak mobile experience	Responsive, mobile-first development	Better engagement across devices

What Our Clients Achieved

(Web Specific Testimonials)

FAQ

How much does a custom web platform cost?

Pricing is project-specific and based on feature complexity, determined during our discovery phase.

How long does website development take?

Most business websites are completed within 4–10 weeks depending on project scope. Timeframes can go upto 6 months for complex web applications.

Do you create mobile-responsive websites?

Yes. All websites are designed with a mobile-first approach catering to all standard devices and screen sizes.

Can you redesign an existing website?

Yes. We offer complete redesign, modernization, and migration services. We specialize in legacy migrations, improving UX and performance while preserving your data.

Do you optimize websites for SEO?

Yes. Technical SEO best practices and general optimization are included. We make the website SEO-ready. However, complete on and off-page SEO are a separate entity altogether.

Which CMS platforms do you work with?

We work with WordPress, Shopify, Webflow, headless CMS solutions, and custom platforms.

What tech stack do you use for complex applications?

We generally build with React, Next.js, and Node.js for high-performance, scalable solutions. However, tech stacks may vary depending on specific requirements.

How is my data secured?

We implement industry-standard encryption, MFA, and security protocols from day one.

Will my website be easy to manage?

Yes. We provide user-friendly CMS setups and training support.

Do you provide website maintenance?

Yes. We offer ongoing maintenance, updates, monitoring, and optimization services.

Can you improve website speed and Core Web Vitals?

Absolutely. Performance optimization is a core part of our development process.

Do you build custom web applications?

Yes. We develop scalable custom web platforms and enterprise applications.

How much of my time is required?

We just need you for weekly milestone check-ins and initial design feedback.

FAQ

What types of business processes can you automate?

We automate workflows across operations, customer support, reporting, lead management, and internal systems.

Can you integrate with our existing software?

Yes. We integrate with CRMs, ERPs, payment gateways, communication tools, and third-party platforms.

Do you build AI chatbots?

Yes. We create intelligent chatbot systems for customer support, lead qualification, and automation workflows.

How long does implementation take?

Most automation projects are completed within 4–12 weeks depending on complexity.

Can automation reduce operational costs?

Yes. Intelligent automation significantly reduces repetitive manual effort and improves productivity.

Do you offer cloud deployment support?

Yes. We configure and manage scalable cloud infrastructure for automation systems.

Is staff training included?

We provide onboarding, documentation, and training support for internal teams.

Can these systems scale as our business grows?

Absolutely. We build scalable automation frameworks designed for long-term growth.

Do you provide ongoing optimization?

Yes. We continuously monitor, improve, and optimize automation workflows post-launch.

Why Businesses Struggle to Scale Efficiently

3 blocks with icon + heading + text

No Qualified Leads – The average B2B website converts only 2% of traffic into leads. Weak targeting, inconsistent messaging, and poor conversion funnels reduce lead quality.

High Acquisition Costs - Inefficient campaigns and poor optimization lead to rising advertising costs (40% - 60%) and declining ROI.

Disconnected Marketing - Without intelligent automation, disconnected SEO, social media, content, and paid campaigns create inconsistent customer journeys.

See –

Why 80% of Mobile Apps Fail.

Building an app is easy. Building a successful product requires avoiding the common pitfalls that drain budgets and lose users.

Poor UX Design

Complexity kills retention. If users can't navigate your app intuitively within seconds, they won't come back.

Performance Lag

A 2-second delay is enough to lose half your audience. Slow loading states and choppy animations drive churn.

Lack of Scalability

Rigid architectures break when traffic spikes. We build apps that grow with your user base seamlessly.

Our Solution

AI-Powered Marketing Services Built to Acquire, Convert, and Retain

Blocks

AI-First Search Visibility — Beyond traditional SEO, we optimise your brand to rank on Google, get cited by AI engines like ChatGPT and Perplexity, and appear in AI Overviews. From technical SEO to Answer Engine Optimisation (AEO) and Generative Engine Optimisation (GEO), we build search visibility that survives every algorithm shift.

Predictive Performance Advertising — Precision-targeted paid campaigns across Google, Meta, LinkedIn, and YouTube — powered by AI bidding strategies, predictive audience modelling, and continuous creative testing to lower your cost per acquisition and maximise return on ad spend.

Audience & Influence Amplification — Strategic organic and paid social programs that build brand authority, drive engaged audiences, and convert followers into pipeline — across LinkedIn, Instagram, Facebook, and emerging AI-curated social feeds.

Authority Content Engineering — SEO, AEO, and GEO-aligned content strategies — from long-form authority articles to AI-assisted content pipelines — that attract qualified traffic, build topical authority, and feed every stage of your conversion funnel.

Automated Growth Marketing— Intelligent automation workflows built on HubSpot, ActiveCampaign, and Zoho that score leads, personalise outreach, recover lost prospects, and drive repeat revenue — without adding headcount.

Conversion Rate Optimisation (CRO) — Systematic A/B testing, heatmap analysis, and funnel audits that turn more of your existing traffic into qualified leads — so every rupee you spend on acquisition works harder.

FAQ

Which digital marketing services do you offer?

We provide SEO, paid advertising, social media marketing, content marketing, email automation, and conversion optimization services.

Do you work with both B2B and B2C brands?

Yes. We create customized growth strategies for both B2B and consumer-focused businesses.

How long does it take to see results?

Paid campaigns can generate results quickly, while SEO and organic growth strategies typically show strong results within 3–6 months.

Do you provide reporting and analytics?

Yes. We provide transparent monthly reporting with performance metrics, lead insights, and ROI tracking.

Can you optimize our existing campaigns?

Absolutely. We audit and improve underperforming campaigns across channels.

Do you help improve landing page conversions?

Yes. CRO and landing page optimization are integrated into our marketing approach.

Which platforms do you advertise on?

We manage campaigns across Google, Meta, LinkedIn, YouTube, and other major digital channels.

Do you offer content marketing services?

Yes. We provide SEO-focused content strategy, blog writing, social content, and lead-generation content assets.

Can you reduce customer acquisition costs?

Yes. Campaign optimization and funnel improvements help improve efficiency and lower acquisition costs.

UI/UX & Product Design

Hero Section

Suggested Heading

Digital Experiences Designed to Increase Engagement, Conversions & User Retention.

Sub-heading

We create intuitive, conversion-focused UI/UX and product design systems that improve user journeys, simplify interactions, and help businesses build products users actually enjoy using.

Pointers

- 3000+ Conversion-focused platforms delivered
- Cross-Platform Expertise
- You get a dedicated User Experience strategist from Day-1.
- Full-funnel reporting from first click to closed deal, every metric accounted for.

Fear Segment

Suggested Heading

Why Most Digital Products Fail to Retain Users

3 blocks with icon + heading + text

Confusing UX – 88% of online users will never return to a confusing digital product. Poor navigation, inconsistent interfaces, and complex workflows increase abandonment.

No CRO Focus – Platforms that look modern but fail to convert - a visually appealing interface without conversion-focused UX leads to low inquiries, purchases, or user actions.

Bad Product Planning – Your development team wastes time fixing usability issues later. Weak product planning and unclear user flows slows delivery by over 30%.

See –

Why 80% of Mobile Apps Fail.

Building an app is easy. Building a successful product requires avoiding the common pitfalls that drain budgets and lose users.

Poor UX Design

Complexity kills retention. If users can't navigate your app intuitively within seconds, they won't come back.

Performance Lag

A 2-second delay is enough to lose half your audience. Slow loading states and choppy animations drive churn.

Lack of Scalability

Rigid architectures break when traffic spikes. We build apps that grow with your user base seamlessly.

Our Solution

Suggested Heading

Why Businesses Choose Matrix Media

Table

Challenge	Our Solution	Business Impact
Poor user engagement	User-centred UX strategy and interface design	Higher retention and improved user satisfaction
Low conversion rates	Conversion-focused wireframes and user flows	More inquiries, purchases, and user actions
Complex product experiences	Simplified navigation and intuitive interactions	Faster onboarding and lower user friction
Costly redesigns during development	Structured product planning and prototyping	Reduced rework and faster execution

Designs That Drive Adoption and Turn Users into Revenue Engines.

Blocks

UI/UX Designs

We eliminate the guesswork from your digital storefront by replacing confusing layouts with frictionless, high-converting user pathways. By optimizing your visual hierarchy and call-to-action placement, we transform passive visitors into paying customers.

SaaS Product Design

We design intuitive onboarding flows that guide users to their first "aha!" moment in seconds, drastically lowering early-stage churn. Our product layouts prioritize feature adoption and self-serve upgrades to turn your software into an automated engine for recurring revenue.

Mobile App UX Design

We engineer thumb-friendly, ultra-fast mobile journeys tailored to the short attention spans of on-the-go users. By smoothing out checkout processes and form completions, we bridge the mobile conversion gap to capture every possible in-app transaction.

Enterprise Product Design Systems

We build centralized, reusable component libraries that allow your team to ship consistent, accessible updates in days instead of months. This eliminates costly design debt, dramatically increases engineering velocity, and ensures a seamless user experience across your entire product ecosystem.

The Matrix Growth Framework

1. Discovery & Research

Understand business goals, user behavior, and product challenges.

2. UX Strategy & User Flows

Map intuitive journeys and optimize interactions.

3. Wireframing & Prototyping

Create low and high-fidelity prototypes for validation.

4. UI Design System

Design scalable, responsive, and brand-aligned interfaces.

5. Testing & Feedback

Validate usability and optimize user experiences.

6. Developer Handoff & Support

Ensure smooth implementation and design consistency.

FAQ

What types of products do you design?

We design websites, mobile apps, SaaS platforms, dashboards, and enterprise applications.

Do you provide both UI and UX design?

Yes. We handle UX strategy, user flows, wireframes, visual design, and interactive prototyping.

Can you redesign an existing product?

Absolutely. We provide UX audits, redesigns, modernization, and usability improvements.

Do you create responsive designs?

All interfaces are optimized for desktop, tablet, and mobile devices. We cover all standard devices and browser resolutions.

Which design tools do you use?

We primarily use Figma, Adobe XD, Sketch, and collaborative prototyping tools.

Do you conduct usability testing?

Yes. We provide usability recommendations and user journey optimization strategies.

Will developers receive design-ready assets?

Yes. We provide structured design systems and developer handoff documentation.

Can you design SaaS dashboards and enterprise platforms?

Yes. We specialize in scalable product and dashboard design systems.

How long does a UI/UX project take?

Most projects are completed within 2–8 weeks depending on complexity and scope.

Why Businesses Struggle to Scale Efficiently

3 blocks with icon + heading + text

Slow Manual Deployments - Inefficient deployment workflows delay releases, increase downtime risks, and slow product delivery. Manual deployment errors cause 66%-80% of all production downtime incidents.

High Infrastructure Costs - Poor resource optimization and fragmented cloud environments create unnecessary operational expenses. Average cloud infra cost overruns are about 15% of infra budgets.

High System Downtimes - Unstable infrastructure impacts user experience, business continuity, and customer trust. 33% of B2B & B2C platform users abandon a digital platform if they experience a downtime once.

See –

Why 80% of Mobile Apps Fail.

Building an app is easy. Building a successful product requires avoiding the common pitfalls that drain budgets and lose users.

Poor UX Design

What Our Clients Achieved

(Marketing Specific Testimonials)

FAQ

Which cloud platforms do you work with?

We work with AWS, Microsoft Azure, and Google Cloud Platform.

Can you migrate our existing infrastructure to the cloud?

Yes. We handle cloud migration, optimization, and modernization projects.

Do you set up CI/CD pipelines?

Absolutely. We implement automated deployment workflows to improve release speed and reliability.

Can you reduce our cloud infrastructure costs?

Yes. We optimize resource allocation, scaling, and cloud architecture to improve cost efficiency.

Do you provide monitoring and uptime management?

Yes. We implement monitoring, alerting, and performance optimization systems.

Can you improve infrastructure security?

Yes. We configure secure access management, backups, and compliance-focused cloud environments.

Do you work with Kubernetes and Docker?

Yes. We provide containerization and orchestration solutions for scalable deployments.

Do you offer disaster recovery and backup solutions?

Yes. We implement backup strategies and business continuity systems.

How long does a cloud migration or DevOps setup take?

Most projects are completed within 4–12 weeks depending on complexity.
